Preview Deployment Suffix

By default, the URL of every new Preview Deployment ends with `.vercel.app`. This setting allows you to choose your own custom domain in place of this suffix. This takes precedence over the team-level preview deployment suffix.

my-deployment. vercel.app

This feature is available on the Pro plan for **$100 per month**.

Upgrade

Data Preferences

Vercel may train on and share code and chat data with AI model providers for training purposes only. If you turn this off, we will not share data going forward for this project.

Transfer

Pause Project

Temporarily stop serving your Production Deployment so the project stops using metered resources. You can resume it at any time.

Preview Deployments, settings, and data are unaffected.
